

The cybersecurity solution for small businesses

Small businesses and micro-enterprises are increasingly "going digital", and face potentially risky situations every day. There are plenty of solutions available to manage cybersecurity risks, but they don't match the needs of small businesses. Most small businesses don't have the expertise, time, or money to even start addressing digital security issues.

This is why we have GEIGER!

GEIGER is an innovation project that will develop a "Geiger counter" for cybersecurity. It will show the level of current risks, and allow the user to take simple measures to lower those risks. GEIGER will also build an education programme and an ecosystem for 'Digital Security Defenders', competent individuals and organisations that offer help and support to small businesses with their cybersecurity, privacy and data protection challenges.

GEIGER project:

Programme: EU Horizon 2020 SU-DS03

Duration: June 2020 - November 2022

Estimated project cost: €4,739,716.61

EU Contribution: €3,999,162.50

Key objectives:

- >500'000 small businesses will be aware of the GEIGER Indicator as a dynamic risk monitoring instrument
- ≥1000 SMEs are connected to the GEIGER Cloud
- 90% of the incidents experienced by the pilot SMEs are detected and resolved within 30 days
- ≥50% of the CERTs/CSIRTs in member states will have confirmed their intent to interoperate with the GEIGER Framework
- ≥10 tools providers will have confirmed their intent to integrate their tools into the GEIGER toolbox.
- ≥200 educated Cyber Security Defenders
- ≥100 certified Cyber Security Defenders
